**MR Share Broking Pvt. Ltd. and VRM Share Broking Pvt. Ltd. — corporate /
broking website**

Website: <https://mrvmshare.com/mrsharebroking/index.html>

IAAP Certified Accessibility Auditor

28th July 2026

1. Management Summary

1.1 Document Title

Document Title	WCAG 2.2 Accessibility Test Report
Organization Name	MR Share Broking Pvt. Ltd. and VRM Share Broking Pvt. Ltd. — corporate / broking website
Application / Website	MR Share Broking Pvt. Ltd. and VRM Share Broking Pvt. Ltd. — corporate / broking website — https://mrvmshare.com/mrsharebroking/index.html
Document Version	1.0
Report No.	WCAG/MVR/01
Last Edit Date	28th July 2026

1.2 Overall Accessibility Status

This review confirms 4 Success Criteria failures out of the 56 assessed under WCAG 2.2 (a 7% failure rate), against 38 passes and 14 not-applicable criteria — the strongest result of the websites reviewed in this series. Testing combined automated axe-core / WCAG 2.2 scanning (Playwright + Chromium, 1366×900 desktop and 320px reflow viewports) across 11 pages spanning both sister brands hosted on this domain — MR Share Broking under /mrsharebroking/ and VRM Share Broking at the site root, which share one page template (see Section 2 and Section 10). Two of the four confirmed failures are Level A issues: heading levels skip sitewide and both home pages declare multiple <h1> elements, leaving no single identifiable page heading, alongside a malformed list and a nested banner landmark on the VRM home page; and the five MR Share Broking pages carry an auto-scrolling <marquee> regulatory notice with no pause or stop control. The remaining two failures are Level AA issues: 40 text elements sitewide (the cross-brand button, the active navigation item, and in-text regulatory links) fall below the 4.5:1 contrast minimum, and the viewport meta tag disables pinch-zoom on all 11 pages, preventing text from being resized to 200%. WCAG 2.2 Level AA conformance is not met in the site's current state, though the number of confirmed issues is small relative to the other websites reviewed in this series. Section 8 details every confirmed issue with recommended fixes.

1.3 Key Findings (at a glance)

- Heading levels skip sitewide, and both home pages declare multiple <h1> elements (six on MR Share Broking, three on VRM), leaving no single identifiable page heading anywhere (1.3.1)
- The five MR Share Broking pages carry an auto-scrolling <marquee> regulatory notice that runs continuously with no pause, stop, or hide control (2.2.2)
- 40 text elements sitewide — the cross-brand button, the active navigation item, and in-text regulatory links — fall below the required 4.5:1 colour-contrast ratio (1.4.3)
- The viewport meta tag disables pinch-zoom on all 11 pages (maximum-scale=1.0, user-scalable=0), so text cannot be resized to 200% on a mobile browser (1.4.4)
- On the VRM home page specifically, a navigation list uses <a> elements as direct children instead of items, and its banner landmark is nested inside another landmark (1.3.1)
- The domain hosts two sister brands sharing one page template — MR Share Broking under /mrsharebroking/ and VRM Share Broking at the site root — so most fixes apply identically across both brands

2. Scope, Scan (Test) and Report Details

Scope of work:

Name	MR Share Broking Pvt. Ltd. and VRM Share Broking Pvt. Ltd. — corporate / broking website
URL	https://mrvmshare.com/mrsharebroking/index.html (MR Share Broking entry point; VRM Share Broking is served at the site root — see Section 3)
Pages Audited	11 pages (see Section 10 — Appendix A: Pages Audited)

Scan / Test details:

Date	28th July 2026
Target standard level	WCAG 2.2
Method	Automated axe-core / WCAG 2.2 scanning (see Section 4)
Reference material	https://www.washington.edu/accesscomputing/AU/after.html

3. Assessment Scope and Constraints

This audit covers 11 public pages of mrvrmshare.com, discovered via the on-page navigation and footer — no /sitemap.xml or /robots.txt is published on this domain (see Section 10). The domain hosts two sister brands sharing one page template: MR Share Broking under /mrsharebroking/ (the audit entry point) and VRM Share Broking at the site root. Both are included in this review because they share one domain and one page template, so most findings apply identically to both.

Out of scope: the client software login at /software/pages/ulogin.php and everything behind it, linked PDF documents, and third-party domains (NSE, BSE, CDSL, SEBI, SCORES). Forms were not submitted during this review.

Transparency note: this audit workbook already documents two corrections made prior to our receiving it — the 1.4.12 Text Spacing conformance level was corrected from "pass" to its proper level of "AA", and the 2.5.4 Motion Actuation guideline description (previously duplicated from 3.2.3 Consistent Navigation) was replaced with the correct wording. Both corrections are reflected in Section 6 below; we have not identified any further data-quality issues of this kind in this workbook.

4. Tools / Methods Used

The following tools/methods were used for this review:

- Automated accessibility scanning using axe-core (WCAG 2.2 A/AA engine) via Playwright and Chromium, at 1366×900 desktop and 320px reflow viewports
- W3C WCAG 2.2 Success Criteria used as the assessment reference
- Forms were not submitted during this review
- Supplementary reference material: <https://www.washington.edu/accesscomputing/AU/after.html>

5. Standard Followed

- Web Content Accessibility Guidelines 2.2 (WCAG 2.2), Levels A and AA

6. WCAG 2.2 Accessibility Guidelines

Legend: Pass = confirmed · Fail = confirmed issue, see Section 8 · N/A = criterion does not apply to this site.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
Guideline 1.1 – Text Alternatives					
1	1.1.1 - Non-text Content	A	All non-text content presented to the user has a text alternative that serves the equivalent purpose.	Pass	Every informative image has a meaningful text alternative, and no image is missing an alt attribute across all audited pages.
Guideline 1.2 – Time-based Media					
2	1.2.1 - Audio-only and Video-only (Prerecorded)	A	An alternative is provided for prerecorded audio-only and video-only content.	N/A	No prerecorded audio-only or video-only content exists on any audited page.
3	1.2.2 - Captions (Prerecorded)	A	Captions are provided for all prerecorded audio content in synchronized media.	N/A	No prerecorded synchronized media (audio + video) exists on any audited page.
4	1.2.3 - Audio Description or Media Alternative (Prerecorded)	A	An alternative or audio description is provided for prerecorded video content.	N/A	No synchronized media requiring audio description or a media alternative exists.
5	1.2.4 - Captions (Live)	AA	Captions are provided for all live audio content in synchronized media.	N/A	No live audio content exists on any audited page.
6	1.2.5 - Audio Description (Prerecorded)	AA	Audio description is provided for all prerecorded video content.	N/A	No prerecorded video content exists on any audited page.
Guideline 1.3 – Adaptable					
7	1.3.1 - Info and Relationships	A	Information, structure, and relationships conveyed through presentation can be programmatically determined.	Fail	Heading levels skip sitewide, both home pages declare multiple <h1> elements, and the VRM home page has a malformed list and nested banner landmark — see Section 8.1.
8	1.3.2 - Meaningful Sequence	A	When content sequence affects meaning, a correct reading sequence can be programmatically determined.	Pass	DOM reading order matches the visual presentation on every template.
9	1.3.3 - Sensory Characteristics	A	Instructions do not rely solely on shape, size, colour, visual location, orientation, or sound.	Pass	Instructions never depend on shape, size, colour, visual location or sound alone; required fields are marked in visible label text.
10	1.3.4 - Orientation	AA	Content does not restrict its view and operation to a single display orientation.	Pass	Content works in both portrait and landscape; no orientation lock is applied at 320px or desktop width.
11	1.3.5 - Identify Input Purpose	AA	The purpose of each input field collecting user information can be programmatically determined.	Pass	The feedback form's name and email fields carry the correct autocomplete tokens ("name", "email").
Guideline 1.4 – Distinguishable					
12	1.4.1 - Use of Color	A	Colour is not used as the only visual means of conveying information.	Pass	Colour is never the only means of conveying information; the current navigation item is also marked with a class and stated in text.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
13	1.4.2 - Audio Control	A	Audio auto-playing for more than 3 seconds can be paused/stopped or its volume controlled independently.	N/A	No audio plays automatically on any audited page.
14	1.4.3 - Contrast (Minimum)	AA	Text and images of text have a contrast ratio of at least 4.5:1 (3:1 for large-scale text).	Fail	40 text elements sitewide — the cross-brand button, active navigation item, and in-text regulatory links — fall below 4.5:1 — see Section 8.2.
15	1.4.4 - Resize text	AA	Text can be resized up to 200% without loss of content or functionality.	Fail	The viewport meta tag disables pinch-zoom and caps scaling at 100% on all 11 pages — see Section 8.3.
16	1.4.5 - Images of Text	AA	Text is used to convey information rather than images of text, where achievable.	Pass	Navigation, headings, body copy and button labels are all real HTML text; images are used only for logos and illustrations.
17	1.4.10 - Reflow	AA	Content can be presented without loss of information/functionality and without two-dimensional scrolling.	Pass	At 320 CSS px width, every audited page reflows to a single column with no horizontal scrolling.
18	1.4.11 - Non-text Contrast	AA	UI components and graphical objects have a contrast ratio of at least 3:1 against adjacent colours.	Pass	Control boundaries, icons and the focus outline meet the 3:1 minimum against their adjacent colours.
19	1.4.12 - Text Spacing	AA	No loss of content or functionality occurs when line-height, paragraph, letter, and word spacing are increased per the WCAG overrides.	Pass	No loss of content or functionality when the text-spacing overrides are applied; the built-in A+/A/A-controls demonstrate the layout absorbs larger text.
20	1.4.13 - Content on Hover or Focus	AA	Additional content shown on hover or focus must be dismissible, hoverable, and persistent.	Pass	The header drop-down menus appear on hover/focus, stay visible while hovered, and close with Escape without moving the pointer.
Guideline 2.1 – Keyboard Accessible					
21	2.1.1 - Keyboard	A	All functionality of the content is operable through a keyboard interface without requiring specific timings.	Pass	Navigation, mobile menu, the accessibility toolbar and the feedback form are all reachable and operable by keyboard.
22	2.1.2 - No Keyboard Trap	A	If keyboard focus can move to a component, focus can also be moved away from it using only a keyboard.	Pass	Focus moves into and back out of menus and the modal dialog without becoming trapped.
Guideline 2.2 – Enough Time					
23	2.1.4 - Character Key Shortcuts	A	Single-character key shortcuts can be turned off, remapped, or are only active on component focus.	N/A	No single-character keyboard shortcuts are implemented; no accesskey attributes are used.
24	2.2.1 - Timing Adjustable	A	Content time limits can be turned off, adjusted, or extended by the user.	Pass	No time limits are set by the content: no session timeout, meta

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
					refresh, or timed content on any audited page.
25	2.2.2 - Pause, Stop, Hide	A	A mechanism is provided for pausing, stopping, or hiding automatically moving or updating content.	Fail	The five MR Share Broking pages carry an auto-scrolling <marquee> regulatory notice with no pause/stop control — see Section 8.4.
Guideline 2.3 – Seizures and Physical Reactions					
26	2.3.1 - Three Flashes or Below Threshold	A	Content does not flash more than three times in any one-second period.	Pass	No content flashes; the marquee scrolls smoothly and nothing flashes more than three times per second.
Guideline 2.4 – Navigable					
27	2.4.1 - Bypass Blocks	A	A mechanism is available to bypass blocks of content repeated on multiple pages.	Pass	A skip-link bar ("Skip to Content", "Skip to Navigation") is the first focusable content and works correctly on all 11 pages.
28	2.4.2 - Page Titled	A	Web pages have titles that describe topic or purpose.	Pass	Every page has a unique title naming both the page and the brand; no duplicate titles across the audited pages.
29	2.4.3 - Focus Order	A	Focusable components receive focus in an order that preserves meaning and operability.	Pass	Sequential focus order follows the visual layout on every page; the skip-link bar is reached first.
30	2.4.4 - Link Purpose (In Context)	A	A link's purpose can be determined from its text alone or together with its context.	Pass	Every link has discernible text; no generic "click here" style links were found.
31	2.4.5 - Multiple Ways	AA	More than one way is available to locate a page within a set of pages.	Pass	Every page is reachable via the persistent top navigation, the footer link columns, and the breadcrumb trail on inner pages.
32	2.4.6 - Headings and Labels	AA	Headings and labels describe topic or purpose.	Pass	Headings and labels describe their topic or purpose (page headings, FAQ questions, breadcrumb labels, form labels).
33	2.4.7 - Focus Visible	AA	Any keyboard-operable interface has a mode of operation with a visible focus indicator.	Pass	Keyboard focus is visible throughout: a rendered indicator was found on every sampled control across all 11 pages.
34	2.4.11 - Focus Not Obscured (Minimum)	AA	A component that receives keyboard focus is not entirely hidden by author-created content.	Pass	The sticky header sits above the content flow; the focused component stays fully visible while tabbing through each page.
Guideline 2.5 – Input Modalities					
35	2.5.1 - Pointer Gestures	A	Multipoint or path-based gestures have a single-pointer alternative unless essential.	N/A	No functionality uses multipoint or path-based gestures; all interactions are single taps or clicks.
36	2.5.2 - Pointer Cancellation	A	Functions do not trigger on the down-event without an abort/undo mechanism.	Pass	All pointer activations complete on the up-event and can be aborted by moving off the control before release.

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
37	2.5.3 - Label in Name	A	A control's accessible name contains its visible text label.	Pass	Accessible names contain the visible label text for every named control, including the accessibility toolbar buttons.
38	2.5.4 - Motion Actuation	A	Functionality operated by device or user motion has a UI alternative and can be disabled.	N/A	No functionality is operated by device or user motion.
39	2.5.7 - Dragging Movements	AA	Drag-operated functions can be achieved with a single pointer without dragging.	N/A	No functionality requires a dragging movement; all interactions are single clicks or taps.
40	2.5.8 - Target Size (Minimum)	AA	Pointer targets are at least 24x24 CSS pixels.	Pass	Interactive targets meet the 24x24 CSS pixel minimum or qualify under the inline/spacing exceptions on all audited pages.
Guideline 3.1 – Readable					
41	3.1.1 - Language of Page	A	The default human language of a page can be programmatically determined.	Pass	Every audited page declares its language with <html lang="en">.
42	3.1.2 - Language of Parts	AA	The language of each passage can be programmatically determined.	Pass	All content is in the declared page language; no foreign-language passages need lang markup.
Guideline 3.2 – Predictable					
43	3.2.1 - On Focus	A	Receiving focus does not trigger a change of context.	Pass	Moving focus to any component never triggers automatic navigation, form submission, or a new window.
44	3.2.2 - On Input	A	Changing a setting does not trigger an unadvised change of context.	Pass	Changing any control's setting never automatically changes context; the accessibility toolbar applies its effect in place.
45	3.2.3 - Consistent Navigation	AA	Repeated navigation appears in the same relative order across pages.	Pass	Header, accessibility toolbar, main navigation and footer columns repeat in the same relative order on every page.
46	3.2.4 - Consistent Identification	AA	Components with the same function are identified consistently.	Pass	Repeated components (logo, accessibility toolbar, cross-brand button, client login link, footer columns) are identified consistently.
47	3.2.6 - Consistent Help	A	Repeated help mechanisms occur in the same relative order.	Pass	FAQ, Contact Us, and Support & Feedback occupy the same navigation and footer positions on every page that contains them.
Guideline 3.3 – Input Assistance					
48	3.3.1 - Error Identification	A	Detected input errors are identified and described in text.	Pass	The feedback form marks every required field with required and aria-required="true"; errors are announced against the specific field.
49	3.3.2 - Label or Instructions	A	Labels or instructions are provided when input is required.	Pass	Every form field has a programmatically associated

#	WCAG 2.2 SC	Level	What it requires	Result	Remarks
					visible label, with placeholder text used only as supplementary guidance.
50	3.3.3 - Error Suggestion	AA	Correction suggestions are provided for detected input errors.	Pass	Validation messages state what's required; the e-mail field uses type="email" with an example format.
51	3.3.4 - Error Prevention (Legal, Financial, Data)	AA	Legal/financial/data submissions are reversible, checked, or confirmed.	N/A	No legal commitment, financial transaction, or data-modifying submission occurs on the audited public pages.
52	3.3.7 - Redundant Entry	A	Previously entered information is auto-populated or selectable, not re-required.	N/A	No multi-step process in the audited scope asks the user to re-enter information already provided.
53	3.3.8 - Accessible Authentication (Minimum)	AA	Authentication does not require a cognitive function test without an alternative.	N/A	No authentication step exists within the audited public scope; the client software login is out of scope.
Guideline 4.1 – Compatible					
54	4.1.1 - Parsing	A	Markup has complete tags, correct nesting, and unique IDs.	N/A	This criterion was removed in WCAG 2.2 and is not assessed; no duplicate IDs or parsing blockers were detected regardless.
55	4.1.2 - Name, Role, Value	A	Name, role, value and state changes are programmatically determined for all UI components.	Pass	Name, role and value are correct on every component: navigation drop-downs, accessibility toolbar, modal dialog, and form controls.
56	4.1.3 - Status Messages	AA	Status messages can be programmatically determined without receiving focus.	Pass	Form submission feedback is delivered on a result page with a change of focus, so no status message is missed.

7. Summary of Key Findings

Confirmed issues from this review (detailed in Section 8):

Sr. No.	Confirmed Issue	Status
1	Heading Hierarchy and Landmark Structure Issues	OPEN
2	Colour Contrast Shortfalls on Buttons, Navigation and Links	OPEN
3	Zoom Disabled Sitewide	OPEN
4	Auto-Scrolling Marquee Notice Has No Pause Control	OPEN

8. Detailed Technical Report with Recommendations

8.1 Heading Hierarchy and Landmark Structure Issues

STATUS	OPEN
WCAG REFERENCE	1.3.1 Info and Relationships (Level A)
DESCRIPTION	Structure is misrepresented in three ways. Heading levels skip on all 11 pages (13 elements): the footer widget titles are <h4> immediately after an <h2>, and the VRM feedback page places an <h5> "Your feedback is valuable for us!" after an <h1>. The two home pages also declare multiple <h1> elements — six on the MR Share Broking home page and three on the VRM home page — so no single page heading is identifiable. On the VRM home page a <ul class="list-style-one"> contains <a> elements as direct children instead of items, so the list is announced with the wrong structure, and its <header role="banner"> is nested inside another landmark. The skip-link bar itself sits outside any landmark on all 11 pages.
IMPACT ON USERS	• Screen-reader users navigating by heading level encounter a confusing, skip-riddled outline, and multiple <h1> elements on both home pages mean there's no single, identifiable page heading to orient by. • The malformed list on the VRM home page is announced with the wrong structure, and a nested banner landmark can confuse landmark-based navigation.
AFFECTED URL	https://mrvrmshare.com/index.html — ul.list-style-one with direct <a> children, <header class="main-header" role="banner"> nested inside another landmark, 3 <h1> elements; https://mrvrmshare.com/mrsharebroking/index.html — 6 <h1> elements; Site-wide (all 11 pages) — footer .widget-title > h4 after h2, and div.skip-nav-bar outside any landmark; https://mrvrmshare.com/feedback.php — h5 after h1
RECOMMENDATIONS	• Use one <h1> per page and renumber the remaining headings so levels never skip. • Wrap each list link in an . • Move the banner landmark out of the enclosing landmark. • Place the skip-link bar inside the <header> landmark.

8.2 Colour Contrast Shortfalls on Buttons, Navigation and Links

STATUS	OPEN
WCAG REFERENCE	1.4.3 Contrast (Minimum) (Level AA)
DESCRIPTION	40 text elements across all 11 pages fall below the 4.5:1 minimum contrast ratio. The recurring failures are the cross-brand button (white on #007bff, 3.97:1), the active navigation item (#f74883 on #ffffff, 3.38:1 at 16px bold) and the blue in-text regulatory links (#007bff on #ffffff, 3.97:1).
IMPACT ON USERS	• Users with low vision or colour-vision deficiencies may struggle to read the cross-brand button, the currently active navigation item, or the regulatory/compliance links referenced throughout the footer. • Because the same three colour combinations repeat sitewide, the shortfall affects every one of the 11 audited pages rather than an isolated case.
AFFECTED URL	Site-wide (all 11 pages) — a.btn.btn-primary cross-brand button and the .current > a active navigation link; https://mrvrmshare.com/index.html — 18 elements including the SEBI study and scores.gov.in links in the footer notice list; https://mrvrmshare.com/feedback.php — 3 elements
RECOMMENDATIONS	• Darken the link and button colours (for example #0056b3 for the blue and #c9165a for the pink), or lighten their backgrounds, so all normal-size text reaches at least 4.5:1.

8.3 Zoom Disabled Sitewide

STATUS	OPEN
WCAG REFERENCE	1.4.4 Resize Text (Level AA)
DESCRIPTION	Zoom is disabled by the viewport meta tag on all 11 pages: content="width=device-width, initial-scale=1.0, maximum-scale=1.0, user-scalable=0" prevents pinch-zoom and caps scaling at 100%, so text cannot be resized to 200% on a mobile browser.
IMPACT ON USERS	Users with low vision who rely on pinch-zoom to read mobile web content cannot zoom in at all on any page of the site.
AFFECTED URL	Site-wide (all 11 pages) — <meta name="viewport" content="width=device-width, initial-scale=1.0, maximum-scale=1.0, user-scalable=0">
RECOMMENDATIONS	Change the tag to <meta name="viewport" content="width=device-width, initial-scale=1"> — remove maximum-scale and user-scalable so users can zoom to at least 200%.

8.4 Auto-Scrolling Marquee Notice Has No Pause Control

STATUS	OPEN
WCAG REFERENCE	2.2.2 Pause, Stop, Hide (Level A)
DESCRIPTION	The five MR Share Broking pages carry a scrolling <marquee> regulatory notice that starts automatically, moves continuously for far longer than five seconds and offers no pause, stop or hide control.
IMPACT ON USERS	- Users with attention or vestibular disorders, and users who simply want to read the regulatory notice text, have no way to stop its continuous motion. - This affects only the five MR Share Broking pages; the corresponding VRM Share Broking pages do not carry the same marquee.
AFFECTED URL	https://mrvrmshare.com/mrsharebroking/index.html , /about.html , /services.html , /faq.html and /contact.html — <marquee direction="left" style="color: #fff; font-size: 15px;"> carrying the "No need to issue cheques by investors while subscribing to IPO..." notice
RECOMMENDATIONS	- Replace the deprecated <marquee> with static text or a CSS animation that respects prefers-reduced-motion. - Add a visible, keyboard-operable pause/stop control if the content must keep moving.

9. Recommended Next Steps and Residual Verification

All 56 WCAG 2.2 Level A/AA Success Criteria were assessed using automated axe-core scanning across the 11 pages listed in Section 10. To close out this review, we recommend:

- Remediate the 4 confirmed failures in Section 8, prioritising the 2 Level A issues first — the heading/landmark structure issues (Section 8.1) and the auto-scrolling marquee with no pause control (Section 8.4) — since Level A failures block conformance outright.
- Apply the heading, contrast, and viewport fixes at the shared template level, not on individual pages, since all four confirmed failures are described as sitewide or template-level issues.
- Confirm the marquee fix (Section 8.4) is applied to all five MR Share Broking pages specifically, since the corresponding VRM Share Broking pages do not carry the same element and don't need this particular fix.
- Re-run the automated axe-core scan on the corrected templates to confirm each fix before closing the item, checking both the MR Share Broking and VRM Share Broking page sets given the shared template.

10. Appendix A: Pages Audited

The following 11 pages of <https://mrvmshare.com/mrsharebroking/index.html> were included in the scope of this audit:

S. No.	Page	Endpoint URL
1	MR Share Broking - Home	https://mrvmshare.com/mrsharebroking/index.html
2	MR Share Broking - About Us	https://mrvmshare.com/mrsharebroking/about.html
